

Title

Inventory Management System

Introduction

The Inventory Management System is designed to help users maintain product information efficiently. The application performs CRUD operations (Create, Read, Update, Delete) while permanently storing records using files.

Objectives

- Learn Object-Oriented Programming.
- Implement file handling.
- Manage products efficiently.

Features

- Product Management
- Product Search
- Product Update
- Product Deletion
- Inventory Report
- Low Stock Alert

Tools Used

- C++
- STL Vector
- File Handling

Advantages

- User-friendly
- Permanent storage
- Easy inventory management

Limitations

- Console application
- No login system

Conclusion

This project improves programming skills by applying OOP concepts to solve a real-world inventory management problem.
